SOCIAL MEDIA

All about EGU – ST

We are happy to announce the launch of the EGU – Solar Terrestrial division blogs together with other social media webpages where you can get in touch with us. This is run by a group of enthusiastic volunteers, Koen Hendrickx (Stockholm University, Sweden), Kamalam Vanninathan (University of Graz, Austria) and the editor Athanasios Papaioannou (National Observatory of Athens, Greece).

Connect with us on social media and send us your fascinating images, captivating movies or interesting results in the field of solar terrestrial sciences. Conducting a special event in your institute or city? Tell us about it and we will advertise it for you. Participating in a special event? Again, tell us what it is about and what you did. Post questions for us and engage the community in an engrossing discussion. Facebook and Twitter are also perfect for advertising open positions available at your institute.

We are putting all our efforts in bringing the community together, to explain science in attractive ways and to encourage others to understand the intimate connection between the Sun and the Earth. Follow our monthly blogposts to find out more.
